The joy of computing using python

Front-End Web Development with
React

Front-End Web UI Frameworks and
Tools: Bootstrap 4 (with Honors)

AWS Fundamentals: Going Cloud-
Native

Abhishek K Yadav

Software Engineer @Tripl | Full-Stack Developer | React.js,
Node.js, TypeScript, Nest.js | AI/ML | LLMs | LangChain | Docker
Bengaluru, Karnataka, India

Summary

Hi, I'm Abhishek. My journey began in a hometown garden, where I learned the value of nurturing growth both in life and in my career. Just as in gardening, I approach my work with curiosity, always learning, adapting, and striving to make things grow.

At Useready, I was recognized for solving critical challenges and improving team efficiency. I thrive on finding the right solutions to make everything click, and I take pride in building strong relationships with the people I work with. For me, growth is just as much about helping others succeed as it is about achieving my own goals.

When I'm not tackling new projects, you'll find me on the badminton court, swimming, or at the gym. Staying active keeps me sharp and balanced much like nurturing a healthy garden.

Let's connect! I'm always open to exploring new opportunities, collaborating on innovative projects, or sharing insights.

Experience

Tripl

Software Engineer

June 2025 - Present (7 months)

Auckland, New Zealand

Superdash

Backend Developer

November 2024 - June 2025 (8 months)

Bengaluru, Karnataka, India

USEReady

Software Engineer

February 2023 - November 2024 (1 year 10 months)

Bengaluru, Karnataka, India

As a Software Engineer at USEReady, I resolved a critical MFA issue, developed Python automation scripts, and designed a microservice for high-precision reports within the Tableau dashboard.

- Boosted software development capacity by resolving a critical MFA issue, enabling faster product releases.
- Improved data migration speed and accuracy by over 40% through Python automation scripts.
- Managed and audited the merging of over 10,000 reports, ensuring secure SFTP delivery via GoAnywhere with PGP encryption.
- Facilitated seamless integration and functionality within the Tableau ecosystem through team collaboration.
- Fostered a culture of code efficiency, enhancing collaboration and product quality.

Fleapo

Full Stack Developer

September 2021 - February 2023 (1 year 6 months)

Kolkata, West Bengal, India

As a Full Stack Developer at Fleapo, I've:

- Developed web applications using React.js/Next.js, Typescript, Node.js, and MongoDB/PostgreSQL to create scalable systems.
- Collaborated with the team to design and implement micro-services architecture, load balancing, and Docker for a resilient system.
- Automated video generation from user data with an ae-script for Adobe After Effects, increasing content production efficiency.
- Integrated customization tools for Scentcraft's platform to enhance user experience and enable personalized fragrances creation.
- Enhanced the onboarding process for influencers by developing a web application using React, Node.js, MongoDB, and Tolstoy APIs, improving user experience and operational efficiency.

Education

Swami Vivekananda Institute of Management and Computer Science
250

Bachelor of Technology - BTech, Computer Engineering · (2018 - 2021)

Regent Education and Research Foundation Group of Institutions

263

High School Diploma, Computer Science · (2015 - 2018)
